Sequence 32259, Application US/0925291A

Sequence 32259, Application US/0925291A

Falcent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFREBNCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 2, Application US/08467781

Patent No. 5780596

GENERAL INFORMATION:
APPLICANT: UTOURATIAN, GARY
APPLICANT: LIDGARD, GRAHAM P
1TILE OF INVENTION: NOVEL MALIGNANT CELL TYPE MARKERS OF THE
1TILE OF INVENTION: INTERIOR NUCLEAR MATRIX
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: TESTA, HURWITZ & THIBEAULT
STREET: 125 HIGH STREET
Score 99; DB 1; Length 639;
Pred. No. 0.24;

Diagnosing paraneoplastic syndrome e.g. paraneoplastic limbic encephalitis or neoplasm e.g. colon cancer comprising assessing a test sample for the presence or absence of antibodies to a Ma family polypeptide.

Claim 48; Fig 9-10; 27pp; Japanese.

The present invention describes a method for diagnosing a paraneoplastic syndrome or neoplasm. The method comprises assessing a test sample for the presence or absence of antibodies to a Ma family polypeptide (I). The method is used to diagnose a paraneoplastic syndrome especially paraneoplastic limbic encephalitis and/or brainstem encephalitis or neoplasm in an individual. The method diagnoses the neoplasm by assessing antibodies to (I) preferably Mal, which is indicative presence of breast cancer, colon cancer, parotid gland cancer, lung cancer, testicular cancer, germ-cell tumours or Mal, which is indicative of testicular cancer, germ-cell tumours or Mal, which is indicative of testicular cancer, germ-cell tumour, and lung cancer. The present sequence is the MaS protein as given in the present invention

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: oyfostatic; hepatotropic; vulnerary; sequences have activities such as: oyfostatic; hepatotropic; vulnerary; antiportalic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antiportalic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition (to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative used to treat cancers, proliferative disorders, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency corrections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes assemblages and computer readable media comprising novel human cDNA sequences and clones derived from human foctal brain, foctal kidney, melanoma, testis and amygdala cDNA libraries. BABA3702 to ABA93766 represent human cDNA sequences from the present invention which encode the proteins given in ABB05662 to ABB05729. The human cDNA sequences and clones can be used in gene therapy. The clones may be used in a variety of applications, for exampl they may be used in profiling assays, for providing large arrays of huma genetic material for implementing large-scale screening strategies and for treating diseases via gene therapy procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  numan CDNA sequences and clones derived from human fetal brain, fetal kidney, melanoma, testis and amygdala cDNA libraries, useful in genetic screening and therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MPLTLLQDWCRGEHLNTRRCMLILGIPEDCGEDEFEETLQEACRHLGRYRVIGRMPRREE

The invention comprises the amino acid and coding sequences of seven human proteins that are preferentially expressed in adult whole brain, foctal whole brain, tonsil and adult hippocampus tissue. The DNA sequences are useful for the analysis of disease-associated single nucleotide polymorphisms and the production of knockout and human disease madel mice. The DNA and protein sequences of the invention are useful for the prevention (vaccine) and treatment of cancer and neurological disorders. The present amino acid sequence represents a human protein of
DNA preferentially expressed in human adult and fetal brain tissue useful for diagnosis, treatment and analysis of cancer and mental disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MPLTLLQDWCRGEHLNTRRCMLILGIPEDCGEDEFBETLQEACRHLGRYRVIGRMFRREE 60

patients. The Ma2 gene and its transcription and/or translation products

may have a causative role in the regional selective neuronal degeneration

CC Prpically observed in AD, or may confer a neuroprotective function to the

cremaining nerve cells. Methods are claimed for diagnosing or

prognosticating a neurodegenerative disease, for monitoring the

CC prognosticating a neurodegenerative disease, for wonitoring the

CC of a neurodegenerative disease, especially AD, in a subject by

determining the level and/or activity of a transcription or translation

CC product of an Ma onconeuronal antigen gene, especially Ma2. Also claimed

CC are: a method for treating or preventing AD and related neurodegenerative

CI disorders using the Ma2 gene or its transcription or translation product;

CI a method of screening for modulating agents of neurodegenerative diseases

CC a method of screening for modulating agents of neurodegenerative diseases

CC and a recombinant non-human animal comprising an Ma2 gene sequence,

CM diagnostic and therapeutic agents.

AAD05121-AAD05203 represent cDNAs corresponding to 24 human secreted protein genes, and AAE01232-AAE01311 represent the proteins they encode. AAE01312-AAE013140 represent human secreted proteins they encode. AAE01312-AAE013140 represent human secreted proteins are they encode. The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 24 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, cognitive disorders, schizophrenia, asthma, skin disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proteins can also be used to aid wound healing and epithelial cell corresponded disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell correspondentate tissues, to identify their cognate ligands or binding before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotexais, and can be used as a food additive or proteins can in the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in disorders mentioned above, and in disorders mentioned above, and indisorders mentioned
                                                                                                                                                                                                                                                                                                                                  Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; predancy-related disorder; endocrine disorder; promine disorder; predancy had pealing; vulnerary; cell culture; chemotaxis; food additive; gene therapy; binding partner identification.

                             AAE01340;
(MEMAP) given in AAB74695 to AAB7431. MEMAPS have cytostatic, antilnflammatory, anticonvulsant, immunosuppressive, antidiarrheic and antiarteriosoclerotic activities, which can be used in gene therapy.

Cantilnflammatory, anticonvulsant, immunosuppressive, antidiarrheic and antiarteriosoclerotic activities, which can be used in gene therapy.

Cantilnflammatory and seased expression of functional MEMAP and antagonists of MEMAP are used to treat a disease or condition associated with decreased expression of functional MEMAP. These disorders include cell proliferative, autoimmune/inflammatory, neurological and gastrointestinal gisorders. The MEMAP polynucleotides and proteins are also used for the disorders. Specific examples of these disorders include cancer, inflammation, atherosoclerosis, epilepsy and diarrhoea.

CMEMAP proteins can be used to screen for compounds which specifically bind MEMAP proteins can be used to screen for compounds which specifically consecutes. MEMAP polynucleotides can be used to prepare transgenic animals which can be studied to provide information concerning human disease. Anti-MEMAP antibodies are useful in immunoassays for the prevent a disorder associated with MEMAP. Polynucleotides encoding MEMAP can be delivered to target cells with genetic abnormalities with respect can be delivered to target cells with genetic abnormalities with respect to the expression of MEMAP to treat or prevent a disorder associated with
                                                                                                                                                                                                                                                                                                               Isolated polypeptide with a human membrane associated protein sequence is useful for the diagnosis, prevention and treatment of cell proliferative, autoimmune/inflammatory, neurological and gastrointestinal disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            to AAF81777 encode the human membrane associated proteins
                                                                                                                              Burford N, Azimzai Y;

miniarteriosclerotic activities, which can be used in gene therapy.

MEMAPS and agonist of MEMAPS can be used to treat a disease or condition
associated with decreased expression of functional MEMAP and antagonists
of MEMAP are used to treat a disease or condition associated with
configuration of functional MEMAP. These disorders include call
configuration of functional MEMAP. These disorders include call
disorders. The MEMAP polyuncleotides and proteins are also used for the
disorders. The MEMAP polyuncleotides and proteins are also used for the
disorders are disorders. Specific examples of these disorders
include cancer, inflammation, atherosclerosis, epilepsy and diarrhoea.
MEMAP proteins can be used to screen for compounds which specifically
bind MEMAP including antibodies, oligonucleotides, proteins and small
molecules. MEMAP polyuncleotides can be used to prepare transgenic
conimals which can be studied to provide information concerning human
disease. Anti-MEMAP antibodies are useful in immunoassays for the
detection of MEMAP protein and can be used as antagonists to treat or
prevent a disorder associated with MEMAP. Polyuncleotides encoding MEMAP
can be delivered to target cells with genetic abnormalities with respect
means and the expression of MEMAP to treat or prevent a disorder associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 NAQAILLELAQDIDYALLPREIPGKGGPWEVIVKPRNSDGEFLNRLNRFLEEERRTVSDM 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
```

Homo sapiens

```
New polynucleotides encoding full-length polypeptides, e.g. secretory and/or membrane proteins, useful for developing medicines for diseases in which the gene is involved, or as target molecules for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 NAQAILLELAQDIDYALLPREIPGKGGPWEVIVKPRNSDGEF--LNRLNRFLEEERRTVS 118

                                                                                                                                                                                                                                                  The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA546071). The coding sequences are useful in the gene therapy of diseases caused by abormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 399;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to isolated NOVX (NOVX1-11) polypeptides and the polynucleotides that encode them. NOVX polypeptides, polynucleotides and anti-NOVX antibodies are useful for treating or preventing a pathology associated with NOVX polypeptide in humans and for treating a syndrome cassociated with human disease e.g. disorders characterised by altered associated with human disease e.g. disorders, angiogenesis and controllity, proliferation and migration e.g. cancer, angiogenesis and wound healing (NOV1-3), neurological disorders, e.g. episodic ataxia, autosomal dominant myokymia, stroke, Parkinson's disease, Alzheimer's disease, non-insulin dependent diabetes mellitus, asthma, hypertenation and seizure (NOV4), enamel defects, such as amelogenesis imperfecta and disorders involving enamel defects, including hypoplasia and hypomineralisation (NOV5-7), paraneoplastic neurological disorders, e.g. paraneoplastic limbic of brain-stem encephalities occurring during testicular cancer, diabetes, reproductive health, metabolic and endocrine disorders, gastrointestinal disorders, immune disorders and autoimmune conferences, respiratory disorders, bone disorders musculoskeletal ciscorders, leukaemia/lymphoma and tissue/cell growth regulation disorders disorders, leukaemia/lymphoma and tissue/cell growth regulation disorders also useful for identifying an agent that binds to it and a cell expressing NOVX polypeptide is useful for identifying a therapeutic agent for treating a pathological state in amammal. The present sequence for treating a pathological state in a mammal. The present sequence correspondence of the present sequence correspondence corres
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      .21 NRVLGSDTNCSAPRVTISPEFWT--WAQTLGAAVQPLLEQMLYRELRVFSGNTISIPGAL 178

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human polynucleotides and the polypeptides they encode. The polynucleotides and polypeptides are useful in diagnostics, encodes, gene mapping, medical imaging, identification of mutations responsible for genetic disorders or other traits, assessing biodiversity and producing many other types of data and products dependent on DNA and amino acid sequences. They are also useful for preventing, treating or ameliorating medical conditions, such as cancer, neurodegenerative disorders (e.g. Parkinson's disease, Alzheimer's disease), lymphoid cell disorders, osteoporosis, osteoarthritis, bone degenerative disorders, periodontal disease, liver fibrosis, infections (e.g. viral, fungal or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polypeptides and polynuclectides, useful for preventing, treating or ameliorating medical conditions, such as cancer, neurodegenerative disorders, lymphoid cell disorders, bone degenerative

The present invention describes a method for diagnosing a paraneoplastic syndrome or neoplasm. The method comprises assessing a test sample for the presence or absence of antibodies to a Ma family polypeptide (I). The method is used to diagnose a paraneoplastic syndrome especially paraneoplastic limbic encephalitis and/or brainstem encephalitis or neoplasm in an individual. The method diagnoses the neoplasm by assessing antibodies to (I) preferably Mal, which is indicative presence of breast cancer, colon cancer, parotid gland cancer, lung cancer, testicular cancer, germ-cell tumours or Mal, which is indicative of testicular cancer, germ-cell tumours or Mal, which is indicative of testicular cancer, germ-cell tumour, and lung cancer. The present sequence is the Mal protein as given in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       240

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic, hepatotropic, vulnerary; antipsoriatic; antiparkinsonian; noctropic; neuroprotective; osteopathic; antipsoriatic; antiparkinsonian; noctropic; neuroprotective; osteopathic; cardiant; thrombolytic; demunosuppressant; immunostimulant; cardiant; thrombolytic; antitherist; antitherist; immunosuppressive; antivital; antitherist; antitherist; antitherist; antitherist; antitherist; thromeolytic; notivity antibacterial; antitherist; antithy of antivital; antitherist; antitherist; antitherist; to presence of or predisposition or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative clasorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NAQAILLELAQDIDYALLPREIPGKGGPWEVIVKPRNSDGEFLNRLNRFLEEERRTVSDM 120

AARD05121-AAD05203 represent cDNAs corresponding to 24 human secreted protein genes, and AAE01232-AAE0131 represent the proteins they encode.

CC protein genes, and AAE01232-AAE0131 represent the proteins they encode.

CC TAR01312-AAE01310 represent human secreted protein variants or regaments.

CC The secreted proteins and their genes are useful for preventing, treating corrected proteins and their genes are useful for preventing treating corrected protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 24 genes, can be products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, heamatopoietic disorders, foetal and developmental abnormalities, heamatopoietic disorders, diseases of the immune system, AIDS, autoimmune diseases (e.g., rheumanatoid arthritis), inflammarion, allergies,

CC diseases (e.g., rheumanatoid arthritis), inflammarion, allergies,

CC cognitive disorders, schizophrenia, asthma, skin disorders (e.g., angiogenic disorders, kidney disorders, and infections. The proteins can also be used to aid wound healing and epithelial call

CC proteins can also be used to aid wound healing and epithelial call

CC proteins can also be used to aid wound healing and epithelial call

CC proteins can also be used to aid wound healing and epithelial call

CC proteins can also be used to aid wound healing and epithelial call

CC proteins can also be used to aid wound healing and epithelial call

CC proteins can also be used to aid wound healing and epithelial call

CC proteins can also be used to aid wound healing and epithelial call

CC proteins can also be used to aid wound healing and epithelial call

CC proteins can also be used to aid wound healing and epithelial call

CC proteins can also be used to all culture of primary tissues,

CC before transplantation, for supporting cell cultures of primary tissues.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes a method for diagnosing a paraneoplastic syndrome or neoplasm. The method comprises assessing a test sample for the presence or absence of antibodies to a Ma family polypeptide (1). The method is used to diagnose a paraneoplastic syndrome especially paraneoplastic limbic encephalitis and/or brainstem encephalitis or neoplasm in an individual. The method diagnoses the neoplasm by assessing antibodies to (1) preferably Mal, which is indicative presence of breat cancer, colon cancer, parotid gland cancer, lung cancer, testicular cancer, germ-cell tumours or Mal, which is indicative of testicular cancer, germ-cell tumours or Mal, which is indicative of testicular cancer, germ-cell tumour, and lung cancer. The present sequence is the Ma4 protein as given in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            259

partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein fragment referred to in the disclosure of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -!- TISCUE SPECIFICITY: Testis and brain specific. In some patients suffering from cancers, it is also specifically expressed by the paraneoplastic tumor cells.
-!- MISCELLANEOUS: Antibodies against PNWA1 are present in sera from patients suffering of paraneoplastic neurological disorders.
-!- SIMILARITY: Belongs to the PNWA family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Biol. Chem. 276:2802-2807(2001).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isogai T., Ota T., Hayashi K., Sugiyama T., Otsuki T., Suzuki Y., Nishikawa T., Nagai K., Sato H., Sugano S., Shiratori A., Sudo H., Wishikawa T., Nagai K., Sato H., Sugano S., Shiratori A., Sudo H., Hagatsuma M., Hosoiri T., Kaku Y., Kodaira H., Kondo H., Sugawara M., Takhashi M., Chiba Y., Ishida S., Murakawa K., Ono Y., Takiguchi S., Watanabe S., Kimura K., Murakami K., Ishii S., Kawai Y., Saito K., Yamanoto J., Wakamatsu A., Nakamura Y., Nagahari K., Masuho Y., Ninomiya K., Iwayanagi T., "NEDO human cDNA sequencing project.";
Submitted (AUG-2000) to the EMBL/GenBank/DDBJ databases.
                              DOMAIN: The BH3-like domain is required for association with BAX and for mediating apoptosis. The three BH domains (BH1, BH2, and BH3) of BAX are all required for mediating protein-protein interaction (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     10; Gaps

and mouse cDNA sequences.";

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).

-!- FUNCTION: Mediates caspase-dependent apoptosis.

-!- SUBUNIT: Homodimer. Blads BAX, BCL2 and BCLX (By similarity).

-!- DOMAIN: The BH3-like domain is required for association with BAX and for mediating apoptosis. The three BH domains (BHI, BH2, and BH3) of BAX are all required for mediating protein-protein interaction (By similarity).

-!- SIMILARITY: Belongs to the PNMA family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NFL BOVIN STANDARD; PRT; 554 AA.

FEBS Lett. 182:389-392(1985).

FEBS Lett. 182:389-392(1985).

- FUNCTION: Neurofilaments usually contain three intermediate filament proteins: L, M, and H which are involved in the maintenance of neuronal caliber.

- DOWAIN: THE EXTRA MASS AND HIGH CHARGE DENSITY THAT DISTINGUISH THE NEUROFILAMENT PROTEINS FROM ALL OTHER INTERMEDIATE FILAMENT PROTEINS PROM ALL OTHER INTERMEDIATE FILAMENT PROTEINS SURFOLDING STRUCTURE SUITABLE FOR INTERACTION MITH OTHER NEURONAL COMPONENTS OR IONS.

-!- MISCELLANBOUS: NF-L IS THE MOST ABUNDANT OF THE THREE NEUROFILAMENT PROTEINS AND, AS THE OTHER NONEPITHELIAL INTERMEDIATE FILAMENT PROTEINS, IT CAN FORM HOMOPOLYMERIC 10-NM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  QVMAGATLINQMLWCRLRELKDQGPPPSFLELMKVIREEEEEASFENESIEEPEERDG 139

Biol. Chem. 268:16679-16687(1993).

-I- FUNCTION: Neurofilaments usually contain three intermediate filament proteins: L, M, and H which are involved in the maintenance of neuronal caliber.

-I- DOMAIN: THE EXTRA MASS AND HIGH CHARGE DENSITY THAT DISTINGUISH THE NEUROFILAMENT PROTEINS FROM ALL OTHER INTERMEDIATE FILAMENT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MISCELLANEOUS: NP-L IS THE MOST ABUNDANT OF THE THREE NEUROFILAMENT PROTEINS AND, AS THE OTHER NONEPITHELIAL INTERNEDIATE FILAMENT PROTEINS, IT CAN FORM HOMOPOLYMERIC 10-NM FILAMENTS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SEQUENCE OF 197-483 FROM N.A.

Why France and analysis of chromosome I of the plant Arabidopsis

The strain A. Tallon A. Tallon L. M., Venter J.C., Davis R.W.,

"Sequence and analysis of chromosome I of the plant Arabidopsis
                                                                                                                                                                                                                                                                                                               Arabidopsis thaliana (Mouse-ear cress).
Eukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta,
Spermatophyta, Magnoliophyta, eudicotyledons, core eudicots, rosids,
eurosids II, Brassicales, Brassicaceae, Arabidopsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -!- PATHWAY: Chlorophyll biosynthesis.
-!- SUBCELLULAR LOCATION: Chloroplast stroma.
-!- SIMILARITY: BELONGS TO THE MG-CHELATRASE SUBUNITS D/I FAMILY.
-!- SIMILARITY: Contains I VWFA domain.
-!- CAUTION: Ref.1 sequence differs from that shown due to erroneous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Green J., Jensen P.E., Gibson L.C.D., Hunter C.N.; "Characterization of the magnesium protoporphyrin chelatase chlD subunit from Arabidopsis thaliana cv. c24."; Submitted (AUG-1998) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Involved in chlorophyll biosynthesis; introduces a magnesium ion into protoporphyrin IX to yield Mg-protoporphyrin
                                                                      16-OCT-2011 (Rel. 40, Created)
16-OCT-2011 (Rel. 40, Last sequence update)
10-OCT-2003 (Rel. 42, Last annotation update)
Magnesium-chelatase subunit chlD, chloroplast precursor (Mg-protoporphyzin IX chelatase) (Mg-chelatase subunit D).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isoid=015742-3; Sequence=VSP 003387;
-!- TISSUE SPECIFICITY: Widely expressed at low levels. Highly expressed in melanoma cell lines.
-!- INDUCTION: By serum and PMA stimulation.
-!- DOMAIN: The NAB conserved domain 1 (NCD1) interacts with EGR1 inhibitory domain and mediates multimerization.
-!- DOMAIN: The NAB conserved domain 2 (NCD2) is necessary for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NECESSARY FOR NUCLEAR LOCALIZATION (BY SIMILARITY).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Tow molecular weight neurofilament protein XNP-L - African clawed frog Cispecies: Xenopus laevis (African clawed frog)
Cispecies: Xenopus laevis (African clawed frog)
Cispecies: Anna-1993 #sequence_revision 18-Nov-1994 #text_change 12-Apr-1995
Cispecies: B.G. Gainer, H.
Richarnas, L.R.; Szaro, B.G.; Gainer, H.
A.Title: Identification and developmental expression of a novel low molecular weight neur

A;Status: preliminary A;Molecule type: mRNA A;Residues: 1-544 <CHA> A;Accession: B44841

transcription init

A; Experimental source: brain A;Note: sequence inconsistent with the nucleotide translation A;Note: sequence extracted from NCBI backbone (NCBIN:110225, NCBIP:110226) C;Superfamily: cytoskeletal keratin
